Project	Signs with Smart Connectivity for Better Road Safety

Traffic Management using Arduino Board with IoT Technology

Implementation of the Internet of Things (IoT) in road safety to reduce traffic management. By fixing the sensor in the road it senses the information and computes the data in the cloud. Where Cloud Computing transmits the data through its respective sub-central. By using these Technologies we can reduce the traffic on the road, and saves human life. It helps the country to become an eco-friendly environment.
